

PMNRCD 2021 Plant Sale Catalog

BLUEBERRIES (1.5 years); best ordered in pairs
Early-Season Blue Ribbon: This variety is known for its high yield and post harvest shelf life. Blue Ribbon plants produce firm, medium-large, light blue fruit, of exceptional quality. Plants grow up to 4-6' tall. Winter hardy, zones 4-7.
Mid-Season Northland: Known for its winter hardiness, this berry variety was developed by Michigan State University. Northland plants produce flavorful medium sized berries that are dark in color. Not only is the fruit delicious but the yellow wood and yellow to orange leaves in the autumn provides interest year round. Winter hardy, zones 3-7.
Mid-Season Blue Gold: Blue Gold blueberry plants are highly productive and have large clusters for easy picking. The fruit ripens in concentrated harvests allowing a high volume of fruit to be used at a time. The berries are large, firm, sweet, and bright blue in color. This plant is a beautiful addition to your landscape with a compact rounded shape growing 4-6' tall. Winter hardy, zones 4-7.
RASPBERRIES:
Mid-Season, Summer Bearing Boyne: This dependable producer grows deep red, firm, medium sized berries. Boyne raspberries are an excellent choice for fresh eating and their aromatic flavor makes them great for freezing and jam as well. Very winter hardy and do well where other varieties experience winter cane damage. Winter hardy, zones 3-7.
Fall-bearing Double Gold: This berry variety produces sweet, medium sized, conical berries, with a striking blush to golden champagne color. The plant is a recent release from Cornell University and is quickly becoming a favorite for home gardeners. Double Gold grows vigorously, can be grown as both a summer and fall producer, and shows disease tolerance. Zones 5-7
STRAWBERRIES:
Jewel: (sold in sets of 5) Jewel strawberries are one of the top recommended plants for commercial and home gardeners. Jewel does well in a variety of growing conditions and is known for its overall quality and consistent production. Berries are large, firm, sweet, and aromatic and are excellent for fresh eating and freezing. June Bearing. Winter Hardy, zones 4-8
ASPARAGUS:
Purple Passion: (sold in sets of 5) Known for its distinct purple color, sweet flavor, and tenderness. Harvest early April through late May. A 6-8" spacing is recommended. Mostly all-male plants. Self-pollinating. Winter hardy, zones 3-8
APPLE TREES (5/8" stock); 4-5 feet tall
Buckeye Gala: Produces apples with crisp white flesh and highly pigmented bright red skin with a deep burgundy stripe that develops through the summer heat. Apples are tangy and sweet making them great for fresh eating as well as for sauces and cider. Early September harvest and great storage. Hardy zones 3-7
Earligold (Harvey): Earligold fruit is medium to large, firm, with yellow skin and a semi-tart flavor. One of the earlier ripening apples, Earligold allows you to enjoy apples throughout the summer season! Good storage. Zones 5-8
Rome Beauty: Rome Beauty is an heirloom variety and one of the top American cooking apples. Hardy and a reliable producer, Rome Beauty is an excellent and easy to grow choice for the home gardener. Fruit is round in shape and striped to almost solid red. Hardy Zone 4
Roseland Red Honeycrisp: A red strain of the Honeycrisp apple featuring bright red skin and crisp white flesh. Honeycrisp apples are known for their well balanced sweet flavor and exceptional crunch. These trees produce a delicious eating apple that has a good shelf life. Ripens September through early October. Winter hardy Zone 4.
NATIVE PERENNIALS (potted, varying container size)
Blue Flag Iris (<i>Iris versicolor</i>): 4x4" pot, Light to deep violet- blue flower with graceful sword shaped leaves. Do best in moist to wet areas and are commonly found in sedge meadows, marshes, along stream banks and shores. Blooms May to July.
Purple Coneflower (<i>Echinacea purpurea</i>): round 1/2 gal pot. Produces tall singular flower heads with brown center and long drooping pink-purple petals. This multi-stalked plant can grow to be up to 2' in a season. Extracts of echinacea are considered to boost immune function.
Native Yarrow (<i>Achillea millefolium</i>): 1/2 gal po. Common yarrow is a flowering perennial with large compact clusters of white to light yellow flower heads. The leaves have a delicate lace-like appearance. Yarrow can grow up to 2-3' tall and is a beautiful addition to a garden. Prefers full sun to partial shade and drier soil. High wildlife value and a favorite of butterflies and bees.

NATIVE SHRUBS: potted (1.5-gal) or barefoot as listed; the upper-range of heights listed in descriptions are for ideal conditions. Hardy zones 3-8
Red osier Dogwood (<i>Cornus sericea</i>)*bareroot 2-3' : Red Osier Dogwood is a medium sized native shrub known for its hardiness and versatility. Red osier dogwood are able to thrive in a variety of conditions but do best in moist areas and are naturally found along shorelines, near river banks or within wetlands. Due to their stunning red stems, white berries and showy foliage, they provide year round interest and are commonly used as landscape plants. Grows 4-10' tall.
Nannyberry (<i>Viburnum lentago</i>) *bareroot 18-24" : Nannyberry is a hardy, low maintenance shrub that produces clusters of showy white flowers and fruit that birds and butterflies will love. Leaves are ovate, finely toothed, and glossy dark green. Fruits may be picked when ripe for jams and jellies. It is often used as a hedge and will grow 6 – 14 feet tall. Prefers full sun to partial shade.
Winterberry (<i>Ilex verticillate</i>) *bareroot 18-24" : <i>not sexed</i> - Winterberry is a deciduous holly that typically occurs in swamps, damp thickets, low woods and along ponds and streams. It typically grows 3-12' tall with toothed, dark green leaves and relatively inconspicuous greenish-white flowers. Flowers give way to bright red berries on the female plants, which persist throughout the winter and often into early spring. Loved by birds, these berries provide considerable impact and interest to the winter landscape. Prefers full sun to partial shade..
Elderberry (<i>Sambucus canadensis</i>) 2-3': potted American elderberry typically grows 5-12' tall with bright green leaves and occurs on streambanks, moist woodlands, thickets, fence rows and roadsides. Its large clusters of small, fragrant, white flowers appear in spring and are followed by clusters of dark purple to black, berry-like fruits (drupes) in late summer to fall. Fruit may be used to make preserves, jellies, pies and wine. Fruit is also attractive to wildlife. Prefers full sun to partial shade.
American Hazelnut (<i>Corylus Americana</i>) *bareroot 2-3' : Hazelnuts are densely growing long lived shrubs, suitable for a variety of soil conditions. In addition to bearing edible nuts for you to enjoy, this native shrub also has high wildlife value by providing shelter and food to a variety of species. Should produce a small amount of nuts within 3-4 years with a larger crop occurring every 2-3 years. During the fall the American Hazelnut has yellow to orange foliage.
Northern Spicebush (<i>Lindera benzoin</i>) potted 18-24" : Spicebush is a medium sized single stemmed shrub growing 6-12ft tall. It has clusters of small yellow flowers in early spring, light green foliage, and glossy red fruit. While tolerant of most soil conditions, they prefer moist, sandy well drained soils. Will thrive in full sun to full shade but tends to produce more berries in locations with at least partial sun. The aromatic leaves, twigs, and fruit can be used in tea.
NATIVE TREES: sizes are noted individually; potted (1.5-gal) or barefoot as listed; Hardy Zones 3-8 unless otherwise noted
American Plum (<i>Prunus americana</i>) *bareroot 2-3' : Small understory tree typically found on woodland edges, stream banks, and upland pastures. Does best in moist, rich, well-drained loamy soil. 15-30' tall at maturity and forms a rounded habit of slender spurred branches. Suckers and in some cases forms thickets or stands. . Produces small sweet plums that are great for fresh eating, sauces, and jellies. High wildlife value and is a favorite for birds and bees.
Serviceberry (<i>Amelanchier canadensis</i>) *bareroot 2-3' : Small open habit understory tree growing 15-30' tall. Serviceberry provide multi-seasonal interest with showy white fragrant flowers emerging in early spring and dark berries in the summer and fall. Excellent wildlife food source.
Witch hazel (<i>Hamamelis virginiana</i>) *potted 1-2' : Small understory shrub-like tree averaging 25 feet in height. Witchhazel has small bright yellow flowers blooming in late fall which often persist part way through the winter. Does best planted on the northern side of homes or slopes due to its need for a semi-shaded environment.
Red Mulberry (<i>Morus rubra</i>) *bareroot 2-3' : Red mulberry is the only native mulberry to North America and the New England area. This medium sized tree typically reaches 20-45' at maturity and grows well in a variety of soil conditions. Produces small purple to red fruit resembling black berries. When fully ripe, mulberries are traditionally dried or eaten fresh and used in desserts, wine, and tea.
Sugar Maple (<i>Acer saccharum</i>) *bareroot 2-3' : Grows to a mature height of 60-75' on average with a 40-50' spread. Sugar maples provide fall interest to the landscape by producing a variety of yellow, orange, and red leaves. The sugar maple is adaptable to a variety of soil conditions being found in rich mesic forests as well as drier upland environments. High wildlife value.
Basswood (<i>Tilia americana</i>) *potted 3-4' : Basswood is easily grown in average, well drained soils in full to partial sun. Basswood are considered soil enhancers bringing calcium and magnesium to the soil surface through leaf litter deposits. Typically grows to a height of 60-80', offering heart shaped dark green leaves with a lighter underside. Produces small round nut-like fruits. High Wildlife value.
Bur Oak (<i>Quercus macrocarpa</i>) *potted 3-4' : White Bur oak adapts to a wide variety of soil conditions, including clay, and has good drought tolerance. It grows to 50-80' tall with dark green leaves which turn to browns and dark reds in Fall. It produces smallish oval acorns with fringed cups loved by many wildlife species. It is often used as a shade tree and prefers full sun.

White Pine (*Pinus strobus*) *potted 1-2': White pine is easily grown in average, medium, well-drained soil in full sun though it is tolerant of a wide range of soil conditions. It typically grows 50-80' and has soft, bluish green needles. Large brown cones are produced after 5 – 10 years. Very attractive to birds.

Balsam Fir (*Abies balsamea*) *bareroot 12-18": Grows in rich, consistently-moist, slightly acidic, well-drained soils in full sun to part shade. These fragrant trees are native to cool climate and will typically grow to 50-70' and offer flattened, shiny, dark green needles and seed cones. They are hardy in zones 3 – 6 and very vigorous.

OTHER ITEMS

2021 PMNRCD Calendar: The calendar features photos from around the Poultney Mettowie watershed taken by PMNRCD staff and local producers. In addition to 12 pages of photos, the calendar also has conservation and agriculture related facts and dates. We will be offering the calendar for early pick up, please contact us if you would like your calendar early and we can arrange pick up or shipping.

VT Wildflower & Grass Seed Mix (4oz packet): Seeds are great for naturalizing an area where a combination of textured grass and colorful flowers are desired. Normal moisture conditions. Great for pollinators. Includes seed of Indiangrass, Little bluestem, Virginia wild rye, Side oats grama, Partridge pea, Black-eyed susan, American senna, Golden alexanders, Big bluestem, Smooth ox-eye, Maryland senna, Whorled rosinweed, and Narrow-leaved goldenrod. *sourced from VT Wetland Plant Supply

*The southwestern region of VT is listed as primarily **Zone 4b** with sections of **4a** and **5a**. Please view a zone map for information specific to your location.

** Please do your own research on native plants listed as edible. Plants may have low level toxicity in some components or amounts and may contain allergens for some individuals. Always be informed when consuming wild foods.

Thank you for your support! All proceeds generated by this plant sale fundraiser go towards Poultney Mettowie NRCD educational and technical programming.
